As the manufacturing sector continues to face scrutiny, discover which US states provide manufacturers with optimal access to renewable energy sources.

Developing U.S. PV manufacturing could mitigate global supply chain challenges and lead to tremendous benefits for the climate as well as for U.S. workers, employers, and the economy.

U.S. efforts to build a domestic supply chain for solar energy components is stalled and will require urgent government action to support the factories needed to compete with China, ...

The Businesses resource page provides relevant information for solar energy use in commercial buildings (businesses, local governments, non-profits and institutions), including fact sheets about ...

While changes to U.S. clean energy tax credits and other restrictions in the One Big Beautiful Bill Act (OBBBA) create a new level of uncertainty, U.S. solar and energy storage ...

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain.

At full capacity, American solar module factories can now produce enough to meet nearly all demand for solar in the U.S. As more solar deployment happens, more manufacturing will come ...

In China, since state-owned PV enterprises have a greater need to serve government objectives to secure legitimacy, PV enterprises with a higher proportion of state-owned shares are usually less ...

Today, US solar manufacturing facilities can produce over 51 gigawatts (GW) of solar modules annually --enough capacity to meet nearly all domestic demand for solar installations.

Are state-owned enterprise factories willing to install photovoltaic panels

To meet set-aside mandates, utilities need to either own solar energy installations or acquire SRECs from retail customers who install rooftop solar. Therefore, SRECs can provide a ...
