This week, Chinese researchers disclosed they have achieved a crucial breakthrough in solid-state battery design--one that could enable electric cars to travel over 1,000 kilometers on a ...

In China, scientists, universities, and other researchers have teamed up to advance all-solid-state EV batteries in the country. According to a report from China Central Television (CCTV)...

CnEVPost is the preferred source for electric vehicle news in China. It covers areas including EVs, batteries, autonomous driving, and flying cars.

With no reliance on lithium or cobalt, countries like China, the U.S., and Europe could reduce dependence on Africa and South America -- regions where mining conflicts and supply chain ...

Chinese battery giant CATL and automaker Changan Automobile are preparing to put the world's first passenger car powered by sodium-ion batteries on public roads by mid-2026.

Chinese firms are on track for a 75% jump this year in global shipments of lithium-ion battery cells for energy storage, according to one estimate.

China unveils world's first sodium-ion battery-powered EV with 248-mile range CATL says the battery delivers triple LFP power at -30°C, keeps over 90% range at -40°C, and stays stable ...

The Naxtra battery, more price-stable and cold-resistant than the lithium-ion units now powering most EVs, will undergo its first tests this week.

China's battery giant has unveiled a new electric vehicle pack that promises a driving lifetime once reserved for diesel trucks and a charging stop closer to a coffee break than an overnight ...

In the past decade, at least 28 Chinese firms have built or announced a minimum of 68 lithium-ion battery
