---

Around 5.6% of people working in the renewable energy sector in Austria were working within solar thermal energy and around 8.2% were working within solar photovoltaics.

Renewable energies are the economic engine of the future worldwide. Here you can find selected data on Austria's renewable energy sector.

Solar Energy - The use of solar energy is not left out in the renewable energy developments in Austria, though it only supplies about 6.3% of renewable energy in Austria. Last year, the Austrian Climate Ministry approved ...

Austria's reliance on PV as part of its renewable energy transition has reached new heights, with PV now contributing significantly to the country's overall energy mix. Total Installed Capacity: 2.6 GW in 2023, with ...

In the 2010s, the new Green Electricity Act boosted the assembly of wind turbines and photovoltaic plants. The share of renewable energy sources in final energy consumption in Austria, which ...

OverviewSources of renewable electricity generationGovernment targetsGovernment policyThe use of hydropower in Austria has a long tradition. At the beginning of the 20th century, hydropower was mostly used for sawmills, mills and forging hammers. Today it is used to generate hydroelectricity. Because of its mountainous terrain from being situated in the Alps, Austria has a large share of hydropower resources. The range of hydropower plants installed in Austria ...

Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production. Austria's last coal-fired power plant closed back in 2020.

The primary objectives of this plan are to increase the share of energy from renewable energy sources in gross

energy consumption and to ensure that 100% of the balanced electricity supply in Austria ...

Depending on the electricity demand in 2030 and available demand-side flexibilities and storage capacity, the optimum for PV can vary. The potential in Austria is huge.

These changes to Austria's subsidy guidelines represent a significant step forward for its solar sector. By making PPAs more attractive and boosting support for electrical storage, the country is ...

In Austria, there are various options for financial support for the expansion of renewable energies.
