More than 50 CCS facilities at power plants are in various stages of development worldwide. Why has it taken so long, and is it sustainable?

Senator Sheldon Whitehouse and Representative Adam Schiff have introduced a new bill to create a federal tax credit aimed at incentivizing carbon removal and storage through the use of ...

Carbon capture, utilization, and storage (CCS) technologies trap carbon dioxide (CO₂) from power plants and industrial facilities and either use or store it underground.

Transition credits, a proposed new category of carbon credits, aim to monetize the emissions avoided through early coal-fired power plant (CFPP) closures and their replacement with clean energy.

These updated credit values close the cost gap for projects using captured carbon oxides as a feedstock to manufacture low - and zero-carbon products and allow for additional flexibility in project ...

In June 2018, after the adoption of the expanded 45Q tax credits, CATF retained Charles River Associates (CRA) to perform a modeling analysis, based on assumptions developed in conjunction ...

Commercial Liftoff (Carbon Management Liftoff) report. OCED's carbon management portfolio includes both direct air carbon capture (DAC), which removes CO₂ directly from ambient air, and point source ...

In this report, the Congressional Budget Office examines the status, federal support, and future potential of carbon capture and storage (CCS)--a process that involves removing CO₂ from the emissions of ...

Achieving net zero requires rapid development of technologies such as low-emissions hydrogen, sustainable aviation fuels (SAF), and direct air capture and storage (DACs). The IEA and ...

Energy storage power station development carbon credits

In AEO2025, we project CO₂ capture at electric power and industrial facilities will increase through the 2030s, primarily due to increased tax credit values. Captured emissions peak at ...
