What drives microgrid development?

Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity.

Do microgrids need protection systems within mdpt?

As designs for microgrids consider higher penetration of renewable and inverter-based energy sources, the need to consider the design of protection systems within MDPT becomes pronounced.

What is a microgrid planning capability?

Planning capability that supports the ability to model and design new microgrid protection schemes that are more robust to changing conditions such as load types, inverter-based resources, and networked microgrids.

Where can I find a report on microgrids for energy resilience?

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at Booth, Samuel, James Reilly, Robert Butt, Mick Wasco, and Randy Monohan. 2019.
