Discover all statistics and data on Solar photovoltaics in Germany now on statista !

Renewables have taken over the main role in electricity generation in Germany, accounting for 254.9 terawatt hours and so almost 60% of the total amount of electricity generated in ...

The sharp rise in solar power generation in 2025 is an EU-wide trend. In EU countries, electricity generation from PV exceeded the combined total from lignite and hard coal (243 TWh) for the first ...

Solar power accounted for an estimated 10.7% of Germany's electricity in 2022, a remarkable increase from less than 0.1% in 2000. This growth reflects the country's dedication to ...

Solar power accounted for around 43 percent of the 23.6 TWh of electricity generated from renewables in that month, according to data from the economy ministry (BMWK).

In Germany, net public electricity generation from renewable energy sources reached a record share of 62.7 percent in 2024. Solar power generation reached a new record of 72.2 terawatt hours in 2024, ...

Electricity generation from solar, measured in terawatt-hours.

Renewable energies have undergone constant growth in Germany. Their share in gross final energy consumption reached 22.4 percent in 2024 (calculated in accordance with EU directive ...

Renewables have taken over the main role in electricity generation in Germany, accounting for 254.9 terawatt hours and so almost 60% of the total amount of electricity ...

Solar power accounted for an estimated 15% of electricity production in Germany in 2024, up from 1.9% in 2010 and less than 0.1% in 2000. [2][3][4][5] Germany has been among the world's top PV installer ...

Germany s solar power generation rate

The strongest net electricity producer was wind power, followed by photovoltaics, which increased its production by 21 percent and thus overtook lignite for the first time.
