-----

In its updated NDC, Haiti commits to unconditionally reducing its greenhouse gas emissions by 6.32% compared to business as usual by 2030, increasing this target to a 25.5% reduction if external ...

Haiti's NDC outlines specific targets aimed at reducing greenhouse gas emissions, while also addressing the need for climate resilience. The current NDC period runs up to 2030, during ...

CO2 emissions per capita in Haiti are equivalent to 0.3 tons per person (based on a population of 11,503,606 in 2022 ), an increase by 0.01 over the figure of 0.29 CO2 tons per person registered in ...

Haiti is exposed to the threat of increasing average temperature, sea-level rise, recurrent severe tropical hurricanes, flooding, decreasing rainfall, and desertification.

As global temperatures rise due to increased concentrations of carbon dioxide, methane, and other greenhouse gases, Haiti faces intensified climate-related challenges, including more ...

It has submitted an Intended Nationally Determined Contributions (INDC) plan, which sets out a 31 per cent reduction in its emissions. Haiti estimates the overall budget for implementing ...

Per capita emissions are about 1 tonne per capita per year, which places Haiti in the 'low' range. Even so, the goal remains to move closer to zero over time. Methane dominates Haiti's ...

In Haiti, nearly 98% of the land has been deforested, significantly reducing ecosystem resilience and exacerbating the negative impacts of climate change on communities.
