How much do solar panels cost?

If you just need a few panels for a small do-it-yourself project, expect to pay around \$200 to \$350 per panel (between \$0.80 and \$1.40 per watt). These prices don't include the cost of a solar storage battery, which can add anywhere from \$7,000 to \$18,000 to your total solar system costs.

How much do solar panels cost in 2024?

The average U.S. homeowner requires an 11-kilowatt solar panel system to cover their electricity usage. For a system that size, you can expect to spend just over \$22,000 in 2024, after federal tax credits. Homeowners who borrow money to cover the costs will pay more because of the interest paid on the loan.

How much do solar panels cost in 2025?

One of the biggest barriers to installing solar panels is the significant upfront cost. In 2025, the average price of a solar installation is about \$21,816 before any incentives are applied. While this \$3.03 per-watt price tag is lower than solar panels have cost in the past, it's still a significant upfront investment.

Are tax incentives a good idea for solar panels?

Federal tax incentives of up to 30% can defray the up-front installation costs, and many states offer incentives to sweeten the pot. But there are several factors to consider before having solar panels installed:

In brief Investing in solar panels in 2025 is a sound financial and environmental decision for many homeowners and especially with the new solar incentives appearing in 2025 and 2026. ...

How Much Do Solar Panels Cost in 2026? The average ...

It costs about \$28,000 to install solar panels. That's a big number, but it can come down significantly with generous incentives from the federal government, as well as from many states.
