In the summer half-year from April to September 2016, UK solar panels produced more electricity (6,964 GWh) than did coal power (6,342 GWh); each meeting about 5% of demand.

With momentum building across policy, technology, and employment, solar power is increasingly seen as the cornerstone of the UK's clean energy future. But it's not without its challenges.

The UK's rollout of wind and solar power over the last decade has made its electricity supply "more British", with significantly less reliance on imported gas, analysis has found.

But solar-powered electricity rose by nearly a third on 2024 levels, helped by the UK's sunniest year on record and the expansion of solar panels around the country.

The UK's solar capacity is on track to reach a minimum of 45 GW by the end of the decade, as part of the country's goal of decarbonizing the power sector and becoming a "clean ...

Solar power generation in Britain so far this year has surpassed the total for 2024 as panels are rapidly installed amid favourable weather, underlining renewable energy's increasing...

New research has revealed that the UK Government is expected to fall significantly short of its revised Clean Power 2030 targets, despite recent approvals for more than 1 gigawatt (GW) of ...

Even after scaling down initial projections in a recent action plan, the UK is predicted to fall short by a substantial 32 gigawatts - enough energy to support millions of households. Solar...

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record.

DESNZ data shows that in 2024, the entire UK solar fleet produced an average of just 9.9% of its total power

Is the UK short of solar power now

capacity - essentially, the climate conditions in this country mean that across the year it was ...
