Kosovo Energy Corporation has planned a 100 MW solar power plant near Prishtina, the largest solar power plant in Kosovo. The solar power plant is estimated to have an annual output of 169 GWh.

Overview Electricity generation Policy and regulation Renewable energy targets Transmission Distribution Electricity consumption Tariffs Lignite exploitation in Kosovo started in 1922. New mines were opened to satisfy the needs by increasing generation capacities. Kosovo Energetic Corporation (KEK) is a public company, which owns and operates with generation assets of electric energy. The greatest part of generation capacities of Kosovo are the two power plants: Kosova A and Kosova B. The capacities of the two power plants are lower than the installatio...

Discover Solar4Kosovo, a new 100 MW solar power plant funded by the EU to help Kosovo transition from coal to renewable energy and meet its 2031 goals.

The project will be a combination of two components: solar district heating (Termokos) and photovoltaic power (KEK), and with this project, around 70 MW will be added to the heating system of Prishtina, ...

A photovoltaic system is being built on the areas where ash from the two coal-fired power plants at Kosovo A was previously deposited. It will have an installed capacity of up to 100 MW and produce ...

Government-controlled Kosovo Energy Corp. (KEK) said it is preparing to start building its Solar4Kosovo 1 photovoltaic plant near Prishtina. It informed the local community that agricultural ...

This investment project will install a solar photovoltaic plant of up to 100 MW capacity on former ash dump fields near Kosovo A thermal power plant. This will be the first large-scale solar photovoltaic ...

Kosovo's ambitious plans for solar energy reflect a broader shift towards renewable power in the Western Balkans. The region has significant potential for solar energy, with abundant ...

Kosovo Solar Power System

This is the first large-scale photovoltaic system in Kosovo that can increase the installed capacity of photovoltaic energy from the current 10.1 MW (2022) to up to 110.1 MW.
