On 10 October 2024 the UK Government gave the green light to a cap and floor scheme to help bring long duration energy storage (LDES) projects to market. LDES projects include pumped storage ...

LDES can encompass pumped storage hydro (PSH), compressed and liquid air energy storage (CAES and LAES), and certain types of battery that can supply electricity continuously for ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

This policy briefing explores the need for energy storage to underpin renewable energy generation in Great Britain. It assesses various energy storage technologies.

It sets out the UK government's approach to supporting investment in long-duration electricity storage through a cap and floor scheme, similar to the one used for electricity interconnectors.

We anticipate that at least 30GW of low carbon flexible assets, which includes electricity storage, may be needed by 2030 to maintain energy security and cost-effectively integrate high levels of...

There is a range of different energy storage technologies in development, which includes flow batteries, mechanical devices (such as pumped hydro, liquid air and compressed air), thermal storage and ...

The joint government and Ofgem Technical Decision Document confirms details of the Long Duration Electricity Storage (LDES) cap and floor scheme and how it will operate.

Following the government publication on Long Duration Electricity Storage (LDES), Ofgem published a call for input in December 2024. This document outlined our role and further ...

London's new energy storage requirements

In March 2024, the House of Lords Science and Technology Committee said increasing the UK's long-duration energy storage capacity would support the UK's net zero plans and energy ...
