-----

We propose a distributed optimization framework that coordinates multiple microgrids in an active distribution network for provisioning passive voltage support-based ancillary services while satisfying ...

In this article, we introduce a one-master-many-slave game optimization model between distribution network operators and multi-microgrids to realize the energy management of multiple ...

The coordinated operation of multi-microgrids and distribution network is an effective way to improve the renewable energy consumption and the mutual support ability.

Taking advantage of bi-level programming theory, this study meticulously formulates a comprehensive optimization scheduling model for the multi-MGs distribution network. The upper-level optimization ...

We construct a distributed optimization model that jointly optimizes voltage robustness and system economic efficiency, effectively resolving the conflict between microgrid economic ...

In recent years, microgrids, as an important component of distributed energy access distribution networks, have become a key strategy for promoting the evolutio

Effectively coordinating an active distribution network and multi-microgrids can significantly improve the penetration rate of renewable energy and provide powerful support for the distribution ...

Aiming at the problems of reduced distribution reliability, long scheduling time, and poor load balance in the current multi-microgrid access distribution network scheduling methods, an active ...

By constructing a DC multi-microgrid system (MMGS) including renewable energy sources (RESs) and electric vehicles (EVs) to coordinate with the distribution network, the utilization ...
