Wind energy is a cornerstone of the nation's power system, offering cost-competitive, emission-free, and locally produced electricity across the country. Wind energy presents a unique ...

The Wind Power tabulates data from a variety of players in the worldwide industry -- wind farm developers, operators and owners, turbine manufacturers, to name only a few -- into useable figures ...

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in 2021, equal to just over 21% of total global production.

Looking for archive data?

Eleven countries now generate more than 20% of their electricity from wind, and seven of these have a share of 30% or more: the leader Denmark, which generates more than one in two ...

As of 2023, Europe had a total installed wind capacity of 255 gigawatts (GW). In 2017, a total of 15,680 MW of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity consumption. In Q4 2023, wind power exceeded coal in European electricity generation for the first...

Wind power generation, 2025 Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources.

In 2024, around 453 terawatt hours of wind electricity were generated in the United States. Wind has advanced to become the main source of renewable power generation in the U.S., ...

Today nearly 84,000 onshore wind turbines across the country are generating clean, reliable power. Wind power capacity totals over 155 GW, making it the fourth-largest source of electricity generation ...

Number of wind power generation hours in the country

The following table shows states with significant wind energy generation, the amount (in thousand megawatt-hours) produced in November, and the percentage increase or decrease since ...
