-----

According to Independent System Operator data, in recent years, the amount of renewable energy curtailed, or wasted, has skyrocketed from both oversupply and so-called congestion, when ...

Solar farms are being shut off, losing more than twice as much potential power than in 2021. The surplus would be worse if utilities weren't paying other states to take some of the excess.

According to the Times, oversupply has occasionally gotten so bad in California that the prices go negative, forcing solar plants to pay energy traders to take it off their hands.
