Our patented light guide film technology Clad Flat Fiber(TM) (CFF) can be used to specify LED locations, design electronics, and provide a complete light guide assembly.

The light guide film is a high-quality polycarbonate-based film specifically designed for use in backlight modules. The film features exceptional high-polish and structural surface textures that effectively ...

3M Ultra Barrier Solar Film offers high light transmission, superb moisture barrier performance and excellent weatherability. 3M Ultra Barrier Solar Film is a UL certified component.

Photovoltaic light-guiding film, with its high light-transmitting substrate and precise microstructure, breaks through the bottleneck: it greatly reduces reflection, guides light to pass through the battery, ...

ACRYLITE® Film for light guide panels is an optical-grade PMMA film engineered for high luminous efficacy and excellent light transmission in light guide panel (LGP) applications.

Luster Sheet is a high-performance light guide film engineered for edge-lit LED applications. It features a special fluorescent adhesive pattern printed on a PET release liner with a ...

The light guiding structures are located on a film, which is optically bonded to the less sunlight-exposed side (i.e. backside) of the bifacial module to reflect light passing through the ...

Discover a wide range of lighting solutions for user interfaces and switch boards. Light guide film technology ensures superior UI navigation on switch boards.

Pure Acrylic Illumination - No diffusers, overlays, or lenses needed! Diffusion gradients are laser etched onto the sheet - unlocking illumination design possibilities like never before.

This includes the Light Guide, Reflector, LED array or Light Bar, Cover Glass and Adhesives integrated into a

Photovoltaic panel light guide film

complete assembly ready to install in your application.
