-----

To address the corrosion issues of PV PHC pipe pile foundations in saline-alkali tidal flat brine environments, the formation mechanisms and chemical composition of the brine were analyzed.

The corrosion tests of various structural materials (aluminum or coated steels) used in PV structures are conducted by exposing them to the sea, and the durability of materials is ...

Hot-dip galvanized ground piles, featuring precision spiral design and long-term anti-corrosion performance, have emerged as a core supporting product, injecting strong impetus into the high ...

PHC pipe pile is widely used in photovoltaic projects because of its short construction period and low cost. However, under the strong corrosive environment of saline-alkali beach, if no anti-corrosion ...

In this post, we delve into the world of galvanic protection and corrosion prevention methods used in solar pile construction to ensure longevity and performance.

In this study, the frost jacking characteristics of steel pipe screw piles for photovoltaic support foundations in high-latitude and low-altitude regions are studied via in situ tests and ...

The parameter  $v$  is defined as the reduction coefficient of corrosion for the stability of the overall structure of the pile foundation; if  $v = 1$ , it indicates that there is no ...

In this paper, we mainly consider the parametric analysis of the disturbance of the flexible photovoltaic (PV) support structure under two kinds of wind loads, namely, mean ...

Field tests of the surface morphology and thickness changes for four types of anticorrosion coatings applied to PHC pipe piles were conducted to determine the protective performance of each...

PHC pipe piles have strong corrosion resistance and good durability, and their bending stiffness is greater than that of spiral steel piles.
