As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in ...

In this exploration of the future of energy, we will delve into the exciting developments in solar and wind energy, examine emerging technologies, and consider the broader implications of our ...

Wind energy has long been a cornerstone of the renewable energy sector, yet it faces increasing competition from solar power, supply chain disruptions, and shifting global policies. Here ...

This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

Explore technological advancements, offshore wind expansion, and the challenges shaping the industry in the coming years.

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed ...

In early 2025, wind and solar together generated more electricity than coal for the first time. This shift was driven mainly by China and India, where renewable output expanded quickly ...

To help anticipate what will be a dynamic. 12 months for US renewables, we organized key data points, observations and analyses according to six themes. While many of the themes are ongoing, how ...

Ryegate Associates explains that the future of solar and wind energy in 2025 is brimming with promise.

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big

Prospects for the future of wind and solar power generation

Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...
