The "renewables" column indicates the percent of that country's electric generation that was renewable. Links for each location go to the relevant electricity market page, when available.

Clean energy continues to dominate new power capacity. For example, in 2024, more than 90% of all new electricity capacity worldwide came from renewable sources such as solar, wind, ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Global renewable energy capacity reached a record 4,448 GW in 2024, driven by solar and wind. But IRENA warns that regional inequality is growing, with most of the new capacity ...

After a 3% drop in global hydropower generation in 2023 due to climate change and El Niño, hydropower generation recovered in many countries, and new solar and wind installations ...

But how rapidly is our production of renewable energy changing? What technologies look most promising in transforming our energy mix? In this article we look at the data on renewable energy ...

This transition is critical in the global fight against climate change, and the continued growth of renewable energy technologies will play a central role in achieving a sustainable energy ...

Comprehensive data on renewable energy by country, providing insights into global efforts toward sustainable energy and highlighting leading nations in using the largest percentage of renewable ...

Find up-to-date statistics and facts on renewable energy sources around the world.

In 2030, renewable energy sources are used for 46% of global electricity generation, with wind and solar PV together making up 30%. By 2030, however, solar PV becomes the foremost renewable ...

Renewable energy production worldwide

This is a list of countries and dependencies by electricity generation from renewable sources. Renewables accounted for 30% of electric generation in 2023. Renewables consist of hydro (47%), wind (26%), solar (18%), biomass (8%) and geothermal (1%). China produced 32% of global renewable electricity, followed by the United States (11%), Brazil (7.0%),
