The roadmap outlined in the report paints a clear picture: the Middle East and Sub-Saharan Africa are preparing to become serious players in solar manufacturing by 2030.

With projections indicating that solar manufacturing capacity could reach up to 44 GW by 2029, MENA is poised to potentially surpass Southeast Asia as a leading solar export hub.

Sinovoltaics' inaugural mapping report forecasts the Middle East and Africa (MEA) to reach 62.12 GW module capacity by 2030, up from 3.4 GW today, signaling the region could fast-become a global ...

This comprehensive map encompasses the entire value chain, from polysilicon production to module assembly, highlighting the Middle East and Africa's growing stature as vital supply hubs for both ...

According to a Wood Mackenzie report, module imports in the Middle East and North Africa (MENA) region doubled to 27 GW in 2024, driven by large-scale solar deployments in Saudi Arabia, the ...

Although much of the announced capacity is backed by Chinese companies, the Middle East and Africa are steadily establishing themselves as alternative suppliers to Southeast Asia, which has long ...

Hong Kong-based technical compliance and quality assurance company Sinovoltaics has released its first Solar Supply Chain Map for the Middle East and Africa.

The Middle East and North Africa (MENA) region is emerging as a "tariff haven," with potential to overtake Southeast Asia as a top solar export hub, based on a new report.

Discover how the Middle East is localizing solar PV manufacturing to meet rising demand and drive its transition toward a low-carbon, industrial future.

With countries like Saudi Arabia leading the way, the region is experiencing substantial growth in solar

Solar module exports to the Middle East

energy development. As the demand for solar panels and related technologies rises, the Middle East is poised to ...
