As the national electricity grid deteriorated, solar panels began appearing on rooftops of homes, hospitals and schools. Citizens, driven by survival, imported panels directly and created ...

The project aims to showcase how solar energy can act as a key driver for rebuilding Syria's energy infrastructure, promoting economic recovery, and reducing greenhouse gas emissions.

The rapid adoption of solar power in northeast Syria, in areas controlled by the Democratic Autonomous Administration of North and East Syria (AANES), has been driven by severe electricity shortages, ...

Knowing that solar power would solve their energy shortages and create positive effects in their community, residents began exploring this possibility with the support of the Aga Khan ...

Investment is beginning to return to the country with the lifting of U.S. sanctions, and major energy projects are planned, including an industrial-scale solar farm that would secure about a...

Committed to transforming the electricity landscape and increasing the adoption of renewable energy in Syria, the government is aiming to have 10% of electricity generated from solar ...

Four importers we spoke to confirmed that most solar panels and batteries are shipped from China to Syria through Jebel Ali Port in the UAE or, at times, the Port of Aqaba in Jordan.

Syria's solar energy sector remains limited despite excellent sunshine conditions, with small-scale projects emerging amid infrastructure damage and power shortages.

Syria's severe energy deficit presents a major opportunity. Discover the business case for local solar module production and how to meet urgent market demand.

This in-depth editorial investigates how solar energy is becoming a national priority in Syria, the motivations

Solar panel production in Syria

behind the move, the challenges on the ground, and what the future may hold.
