Californian power authorities have finished their first solar panel-covered canal project, that will generate 1.6 megawatts.

What it aims to do is: install solar roofs, the famous photovoltaic panels, over all stretches of irrigation canals. In other words, the goal is to produce renewable energy while ...

Two projects in the western US are testing the feasibility of installing solar farms over sun-drenched irrigation canals.

The 2,600-paneled solar system under construction on the Gila River Indian Community near Phoenix is on track to be the first solar array over a canal in the Western Hemisphere.

Cover as much of California's roughly 4,000 miles of irrigation canals with solar canopies as possible. Brandi McKuin, the lead University of California researcher on the project, says dozens ...

Covering water with solar panels is not a new idea. But for some it represents an elegant mitigation of water shortages in the West. Doing so could reduce evaporation, generate more...

Solar on canals has long been discussed as a two-for-one solution in California, where affordable land for energy development is as scarce as water. But the grand idea was still a hypothetical.

Near Hickman, California, just outside Modesto, a 110-foot-wide grid of solar panels now tops a section of canal, arching over the gently flowing water.

In an innovative project aimed at addressing both water conservation and clean energy production, the California Solar Canal Initiative (CSCI) is set to install solar panels over the state's canals, potentially ...

The idea is simple: install solar panels over canals in sunny, water-scarce regions where they reduce
