What is the solar package?

The solaR package allows for reproducible research both for photovoltaics (PV) systems performance and solar radiation. It includes a set of classes, methods and functions to calculate the sun geometry and the solar radiation incident on a photovoltaic generator and to simulate the performance of several applications of the photovoltaic energy.

What is solar2?

The solaR2 package allows for reproducible research both for photovoltaics (PV) systems performance and solar radiation. It includes a set of classes, methods, and functions to calculate the sun geometry and the solar radiation incident on a photovoltaic generator, as well as to simulate the performance of various photovoltaic energy applications.

What are the different types of solar power generation?

Solar power generation is categorized mainly into photovoltaic and photothermal power generation. Photovoltaic power generation involves the use of solar photovoltaic cells to convert sunlight directly into electric power based on the photovoltaic effect.

How to evaluate the power generation and generation efficiency of solar photovoltaic system?

A new method for evaluating the power generation and generation efficiency of solar photovoltaic system is proposed in this paper. Through the combination of indoor and outdoor solar radiation and photovoltaic power generation system test, the method is applied and validated. The following conclusions are drawn from this research.
