As countries are building solar power to replace electricity generated by burning fossil fuels, this is the comparison that matters when assessing the lifecycle emissions of solar power.

But if you're thinking that solar power is your gateway to energy independence, solar panel systems alone may not be enough. Here's why. Part of the beauty of your solar system is the ...

Along with their desperately needed but expensive battery-storage projects, wind and solar power generators wait in yearslong lines to come onto the grid, and then they face huge ...

Solar peaks when the sun goes down and electric vehicles require large amounts of electricity, both of which can lead to special demand charges that can increase electricity bills by ...

The result is a structural paradox: renewables are accelerating, but not fast enough to displace fossil fuels. Instead, they're merely supplementing growing demand--allowing carbon ...

Conventional power plants can simply increase the power output in a variety of ways on demand. Unfortunately, we lack the ability to summon the Sun on demand, so if a Solar power plant ...

So whereas we'd like to believe that building wind and solar farms will allow us to close dirty power plants, it's not so. Those old fossil-fueled plants have to be kept online to power the grid ...

While solar panels have been at the forefront of the renewable energy revolution, they alone are not sufficient to meet the growing energy needs of the modern world.

And there is also the natural tendency for the market to grow, requiring more energy to power more businesses and homes. Meanwhile, there is not enough supply to meet growing demand ...

This case study provides an illustrative example of a power grid where renewable generation (solar) will be

Solar power is simply not enough

more readily available during the day than at night.
