A solar power canopy situated over an irrigation canal near Turlock, California, is generating enough electricity to power several thousand homes.

OverviewEngineering and constructionInauguration of pilot projectPraise for the projectSee alsoExternal linksThe engineering, procurement and construction contract for the project was awarded to SunEdison at a cost of INR177.1 million (US\$2.1 million). The pilot project was developed on a 750-meter stretch of the canal by Gujarat State Electricity Corporation (GSECL) with support from Sardar Sarovar Narmada Nigam Ltd. (SSNNL), which owns and maintains the canal network. The cost per megawatt of solar power, in this case, was much less than regular solar power plants, a...

The UWUA has witnessed many shifts in the energy sector, but DTE Energy's recent decision to establish a state-of-the-art battery storage facility at the former Trenton Channel Power ...

Instead of using farmlands or open spaces for solar farms, engineers have installed solar panels directly above canals, making the same area produce both electricity and water savings. This ...

Here we use regional hydrologic and techno-economic simulations of solar photovoltaic panels covering California's 6,350 km canal network, which is the world's largest conveyance system ...

This story was originally published by Canary Media. A novel solar power project just went online in California's Central Valley, with panels that span across canals in the vast agricultural...

The canal top solar power plant is one of the innovative ideas which efficiently uses land and observe water. It presents a higher administrative model for smart villages, clear metropolis, and ...

A graphic provided by the California Solar Canal Initiative cites numbers from a 2021 UC Merced study on the potential impacts of placing solar panels over canals to save water and ...

Solar power station in the channel

Assuming a utilization of only 10% of the existing canal network of 19,000 kilometres (12,000 mi), it is estimated that 2,200 MW of solar power generating capacity can be installed by covering the canals ...

The first canal-top solar system in California has the potential to provide power and water to two million homes.

The idea is simple: install solar panels over canals in sunny, water-scarce regions where they reduce evaporation and make electricity.
