-----

This 2D visual model illustrates the scale of the sun and planets in our solar system, and their current distance from the sun.

This page shows a scale model of the solar system, shrunken down to the point where the Sun, normally more than eight hundred thousand miles across, is the size you see it here.

Calculate the scaled planet diameters and planet-sun distances for a solar system model. Enter scale or diameter or distance, select to show table and/or map below, select options, then press Calculate.

A scaled representation of the solar system ? Earth diameter in pixels Scale distances

The best way to understand the true dimensions of the solar system is to create a scale model. Use the tool below to visualize the solar system at various scales.

Understanding the size differences of objects in the solar system as well as their correct distances from each other is important. There are many good projects that will show you how to make your own ...

A true-to-scale 3D model of our solar system with accurate planetary sizes, distances, and scientific data

The Solar System is huge, and the distances are beyond our imagination. This website aims to give an impression of the vast space with all distances and graphical representations of the Sun, planets and ...

To construct a solar system model, enter 5 (for example) in the scale factor box, click &quot;Earth diameter&quot;; and you will have all the dimensions in terms of the Earth's diameter.
