How does Copenhagen get its electricity?

Copenhagen gets the majority of its electricity from both onshore and offshore wind energy (such as the Middelgrunden Offshore Wind Farm, pictured here). Copenhagen also gets energy from shares of biomass (including waste-to-energy systems) and solar (solar photovoltaics and solar thermal).

What percentage of Danish energy consumption is used in buildings?

Source: Odyssee2.2. ENERGY EFFICIENCY POLICIES Nearly 40 % of the Danish energy consumption is used in buildings. To meet the long-term challenges, with higher prices and securing our energy of supply, it is important to reduce energy consumption in buildings. Building codes The energy requirements for new buildings have been s

How is energy consumption measured in Denmark?

Net calorific value is used in the national Danish energy statistics. Energy consumption for heating in Denmark is somewhat dependent on outdoor temperature, which varies from year to year. A measurement of climatic variations is "degree days", registered by the Danish Meteorological Institute (DMI).

Does Danish Energy Agency publish monthly energy production and consumption statistics?

Danish Energy Agency has published monthly energy production and consumption statistics, which are available online in excel format. (Latest version: October 2025. Next version for November 2025 will be available on 14th of January 2026). Since January 2005, the Danish Energy Agency has published a monthly oil supply statistics.

Denmark has a long tradition of setting ambitious world-leading national energy targets. The country aims for renewables to cover at least half of the country's total energy consumption by ...

Key figures for development in production and consumption of energy, renewable energy, wind power, CHP, energy intensity and CO2 emissions.

Why Copenhagen Homes Need Energy Storage Now You know, Copenhagen's renewable energy adoption rate hit 82% last month - but here's the kicker: most households still waste 40% of their ...

The proportion of household energy storage in Copenhagen

measures in all sectors except transport sector. The following descriptions of energy efficiency policies and measures in Denmark is based on the MURE database for energy efficiency ...

One particularly innovative citywide measure in Copenhagen involves the creation of biogas from household waste and sewage throughout Copenhagen - waste-to-energy.

The policies and measures to promote energy efficiency in buildings are a combination of economic incentives (Making it easier for homeowners to renovate their homes, implementation of scheme to ...

Danish Energy Agency has published monthly energy production and consumption statistics, which are available online in excel format. (Latest version: November 2025).

Adjusted gross energy consumption, which the Danish Energy Agency estimates in addition to observed energy consumption, is found by adjusting observed energy consumption for the ...

Executive summary Denmark has been an early leader in decarbonisation and is inspiring many countries around the world. The technological transformation of Denmark's energy ...

The slowdown in household storage growth is causing a shift, with a decrease in the proportion of countries dominated by household energy storage. Conversely, the United Kingdom is experiencing ...
