What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

When will large-capacity energy storage systems become popular?

As market demand evolves, large-capacity energy storage systems continue to advance. In 2024, 20-foot 5MWh+ systems were widely released and commercialized in H2. By 2025, 6~9MWh+ systems took center stage at ESIE 2025.

How much energy does New York City subway use?

In 2021, the New York City Transit Subway system consumed approximately 1,500 GWh of traction energy with a demand of about 3,500 megawatts (MW), costing around \$203M. Subway trains introduced in the past 20 years have included the capability to perform regenerative braking. All new subway car procurements require regenerative braking capability.
