Stiffening rings, or stiffener rings, are elements placed outside or inside a shell to make a vessel more resistant to external pressure.

PV systems can be mounted on the ground or roof, or they can be a component of the building's envelope. New PV systems installed on new and existing buildings shall comply with ...

This tool is intended to help local government officials and authorities having jurisdiction (AHJs) understand and streamline the solar photovoltaic (PV) permitting and inspection process to ensure ...

In photovoltaic systems, a variety of different types of fasteners can be employed depending on their function and application scenario. Below, we delve into several commonly used ...

Secure PV module in place with end clamps. Place second PV modules on rails in line with first panel. Secure the two PV modules together with the mid clamp as pictured. Check all Post, Strut and Purlin ...

Areas occupied by rooftop structures, water towers, greenhouses, mechanical equipment, towers, antennas, parapets, guardrails, solar thermal systems, equipment access pathways and ...

The New York Solar Guidebook has information, tools, and step-by-step instructions to support local governments managing solar energy development in their communities. The Guidebook contains ...

Local Law 92 and Local Law 94 require that the roofs of certain buildings be partially covered with green roof or solar photovoltaic electricity generating systems in accordance with the New York City ...

Stiffener rings reduce thickness requirements and save up to 850 kg of steel in construction. Minimum shell thickness for internal pressure is 18 mm; for external pressure, it is 22 mm. Mounded bullets ...

R505.3.4 Bearing stiffeners. Bearing stiffeners shall be installed at each joist bearing location in accordance with this section, except for joists lapped over an interior support not carrying a load ...
