What is a containerised generator?

Like the canopy sets, containerised generators are built to house the generators and ensure they are soundproof, which is completed by the containers being heavily fitted with soundproofing technology, and like the open sets can reach a high-power output of 3000KVA for diesel and up to 2000KW for gas power.

What are open set generators used for?

Generators from our open set range are mainly fitted in prebuilt areas, such as basements, and are used to power various types of buildings such as leisure complexes and hospitals as a backup power supply should their main source of power fail, but some are used for prime power purposes as well.

Should a generator be enclosed or able to be open?

Upon applying for a generator, many applications will require a specific type of generator to be used and specify if it needs to be enclosed or able to be open. This can raise questions as to why this is required and within this article, we can explain in more detail by discussing the difference between all the options available.

Open-Sets

Should you choose a cogeneration unit or a diesel generator?

With diesel generators, containerised sets are mainly used to provide power for large buildings such as office buildings or hospitals, but for gas powered generators a lot of customers will opt for a cogeneration unit due to them being able to provide a high power and heat output helping to save money across the domestic bills of the customers.

With advancements in technology, two prominent options have emerged: containerised generators and traditional generators. This article will explore the benefits of each and help you determine which is ...
