Build-it-yourself model kit of Wind Powered Walking Robot. The mini strandbeest moves just by the wind and its own engineering genius. Walks on the wind by hand or by blowing against the propeller. Product Name: DIY ...

Kit DIY to ride a Strandbeest miniature: a mechanical creature that walks driven by the wind by means of a front propeller and the Theo Jansen's leg mechanism. No batteries required - just blow on it or use a fan.

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

The company generates electricity from coal-fired plants, gas-fired plants, IGCC, gas power, wind and solar power units. Its applications are used in research and technology.

Product Description This bipedal robot is designed to walk in the direction of air ...

No electricity or batteries help power this beautiful creature and allows you to spend time exploring the design while you build it. It's an amazing creatures infused with the power of nature.

In this video, we'll delve into the intricacies of the Strandbeest mechanism, exploring how it harnesses wind power to come to life.

China just tested a hovering wind turbine that sends power to the grid from 2,000 meters up, hinting at city renewables soon. The post China Tests Flying W

Remove the wind turbine from the Mini Strandbeest as the weight will drag it down, and then insert the flange into the crankshaft. When you turn the rotating shaft, the Mini Strandbeest will start to walk.

Product Description This bipedal robot is designed to walk in the direction of air currents. The robot first

Wind Beast Power Station

needs extra power in order to turn the wind turbine and lift each leg, so it needs to be adjusted as necessary to try ...

First ever portable power station for the field powerful enough to drive your commercial portable welding equipment. The BEAST is the first of its kind portable power station to feature 5-10kW Instant Peak Power(TM) ...
