That's why we're proud to introduce the Gurit98m - a new open-source blade model designed to support the development, design, and optimization of wind turbine blade materials.

The Gurit98m blade model is designed to represent the current generation of large offshore wind turbine blades, enabling the acceleration of R& D and the integration of new and ...

Nonlinear finite element methodologies are now central in blade design, giving insight into the structural behavior and speeding up design iteration. This work aims to examine finite element ...

Download a CAD design of a wind turbine blade, suitable for engineering and industrial applications.
